

Splitting Costs Between Cost Centers Quick Guide

Please follow these best practices when splitting costs between two or more cost centers to prevent encumbrance issues:

- Accounting codes should be entered <u>at the line level</u> when splitting costs between one or more cost centers. Enter one cost center at the header and enter the additional cost center(s) to be charged, along with the split distribution, at the line level.
- The total amount for the line item should be charged to <u>only one account number</u>.
- Split by "percent of price" rather than by "amount of price."
- Minimize the number of lines with split distribution of costs to the extent possible.

Enter One Cost Center at the Header

- Scroll to the Accounting Codes "Header" section on the requisition's main page. Click on the pencil icon to open the accounting code fields.
- Enter the cost center number for one of the cost centers in the first field and click on the checkmark to recalculate and populate the chartstring (accounting code) fields.
- Enter an account code for one of the items. Save.

- Enter your cost center numbers in the first field labeled the "Speedchart Key" field of each row.
- Enter the account number for the item on each row. The account number should be the same for all rows.
- Click on the checkmark to populate the remaining fields with the cost center chartstrings.

Calculating Percentages for a Split Distribution

• To calculate percentages for a split distribution of costs, list the amounts to be charged to each cost center. The total amount should equal the total cost to be split between the cost centers.

Cost Center	Amount to Charge
37730020	\$80,000.00
37051022	\$20,000.00
40030455	\$136,540.00
Total Cost	\$236,540.00

Calculating Percentages for Split Costs

- Calculate the percentage to be charged to each cost center by dividing the Amount to Charge by the Total Cost.
- The percentages, carried out to six decimal places, should equal 1.

Cost Center	Amount to Charge	Percent of Total Cost
37730020	\$80,000.00	0.338209
37051022	\$20,000.00	0.084552
40030455	\$136,540.00	0.577239
Total Cost	\$236,540.00	1

Calculating Percentages for Split Costs

- Validate by multiplying the Percentage of Total Cost for each cost center by the Total Cost.
- The resulting amount to be charged to each cost center may vary slightly from the original amount due to rounding.

Percentage of Total Cost	Multiply	Split Costs
0.338209	.338209 X \$236,540	\$79,999.96
0.084552	.084552 X \$236,540	\$19,999.93
0.577239	.577239 X \$236,540	\$136,540.11
1		\$236,540.00

Splitting Costs Between Cost Centers

- Select "% of Price" from the dropdown list to set your distribution method to split by percent.
- Enter the percent of the total to be charged to each of the cost centers in the percent field on the respective row.
- You can include up to four decimal points. For example, 25.3452.
